In this assignment students will learn about AWS SNS and send an SMS to the student mobile phone.

1. We can send a SMS using the Amazon SNS -> Text messaging (SMS) -> Publish text message. Since we are using an AWS Academy account the number must be added to the Sandbox before we can publish.

   Afterwards, the student can send the SMS like the below image:

2. Now we are going to send an SMS through a lambda function.

Try to make the following steps:

a. Create a new SNS topic with type “Standard”
b. Add to that topic a new Subscription with the protocol SMS and the student mobile number
c. Create the lambda function (with the specific destination) with a code like this:
