Plataformas de Desenvolvimento

24/25

Mestrado em Informática e Sistemas

Objectives

- Netlify
- Alternatives

Netlify

- We have seen until now CI/CD tools and processes without any kind of leverage or *SomethingaaS*.

- There are some Cloud Providers that handle some of the features we mentioned in previous classes in a serverless way:
  - Continous Delivery
  - Continous Integration
  - Testing
  - FrontEnds
  - …

Netlify

Cloud-based platforms to build, deploy, and manage modern web projects. Here are a few examples:

- Options:
  - Azure
  - AWS (Amplify)
  - Netlify
  - Vercel
  - Firebase
  - Render
  - …

Netlify

Netlify is a cloud-based platform that provides web developers and businesses with a range of tools and services to build, deploy, and manage modern web projects.

It offers a global content delivery network (CDN), continuous deployment, serverless functions, and other features that make it easy to create and host high-performance websites and applications.

Serverless and leverage deployment to build sites faster

It supports integrations with popular Git repositories like GitHub, GitLab, and Bitbucket, allowing developers to quickly and easily deploy code changes to their sites.

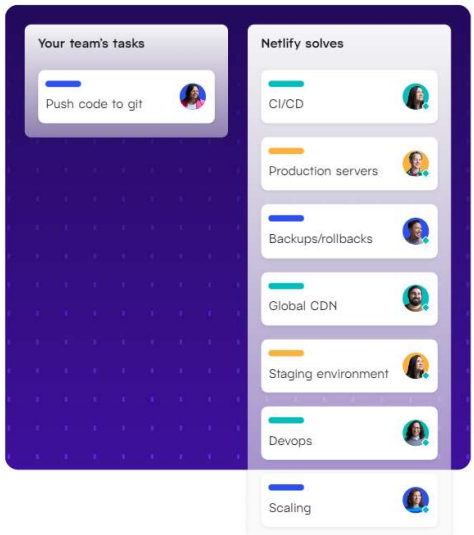

5

Netlify

- Netlify operates through your GitHub repository and runs a build process to pre-render all pages
- Distributes content across a wide CDN
- Free plan with a lot of options
- CI/CD for frontend

6

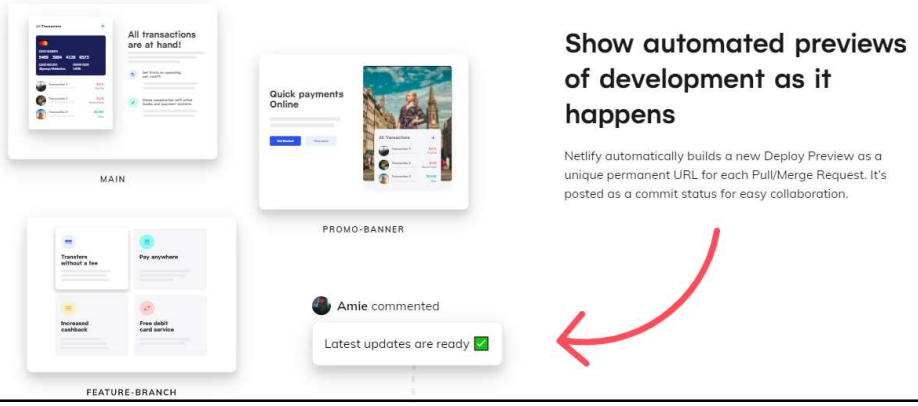

Netlify

7

Netlify

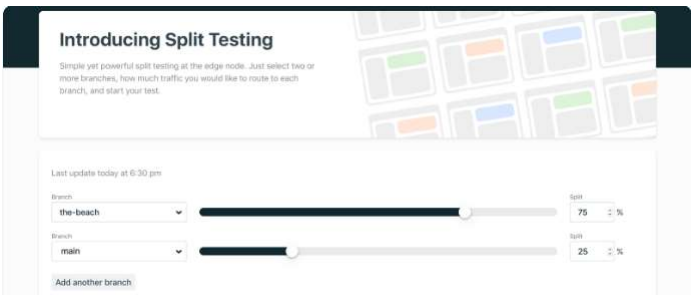

- Deploy previews
  - Each branch or Pull Request (PR) can have a preview to understand how changes will look.

8

Netlify

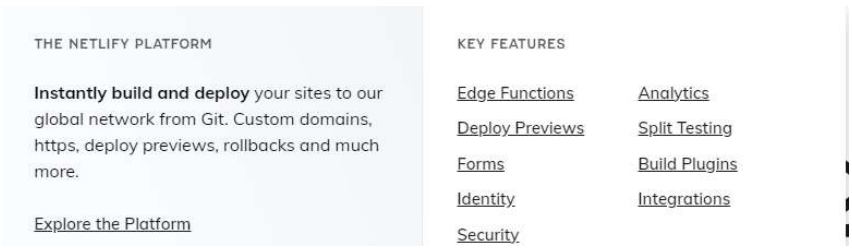

- Split Testing
  - Netlify's Split Testing lets you divide traffic to your site between different deploys,

9

Netlify

- A lot more

10
