1. **Project introduction**
2. **Project Context**
   - Describe Client /business Area
3. **Project Objective**
   - What is the goal?
   - What is the value?
   - To do what…?
   - We have this and that, but if we have the info of … we could …
   - Who will use the info?
4. **Data sources**
   - What data do I have?
   - What data do I need?
   - Where is the data?
   - Is data available?
   - How can I get it?
   - What format?
   - What is frequency?
   - When is produced?
   - Characterize the data sources (the V's)
5. **Data Processing**
   - How data is collected?
   - When is data ingested?
   - When is processed?
   - How is processed?
   - Who will use it?
   - When must be available?
   - Time constraints?
6. **Data Visualization**
   - How to show the information? Graph, map, …
7. **Proof of Concept**
   - What data is used?
   - How to get the data?
   - Viability analysis
8. **Project Risks / Limitations**
   - I need this …, but only have this …
   - Steps required to full implementation
9. **Conclusions**
   - Including BigData summary Characterization (the V's)
   - Lessons learn from Proof of Concepts
